

BRAND GUIDELINES

One mark. One purple. No exceptions.

The authoritative visual identity reference for PeakLogic — product, marketing, and partner-facing material alike.

v1.0

[Mark](#) [Logotype](#) [Typeface](#) [Clear space](#) [Palette](#) [The rule](#) [In context](#) [Usage](#) [Spec](#)
[Favicon](#) [White-label](#)

01

The mark

A two-facet triangle — a solid purple peak with one green highlight facet layered over its upper-right face. The geometry is fixed; only the crop changes between a standalone and an inline rendering.

LIGHT

DARK

```
<svg xmlns="http://www.w3.org/2000/svg" viewBox="0 0 32 32" fill="none">
  <path d="M4 28 L12 10 L18 20 L23 12 L28 28 Z" fill="#7C3AED"/>
  <path d="M18 20 L23 12 L28 28 Z" fill="#22C55E" opacity="0.85"/>
</svg>
```

[Copy SVG](#)

The two facets are never recolored independently, and the mark is always scaled uniformly — never stretched on one axis.

02

The logotype

Mark and wordmark, set in Inter at weight 800. "Peak" flips between ink and white to stay legible on its background — "Logic" does not flip. See §6.

LIGHT

DARK

```
<svg xmlns="http://www.w3.org/2000/svg" viewBox="0 0 230 48" fill="none">
  <g transform="translate(0,6)">
    <path d="M0,36 L16,0 L28,20 L38,4 L48,36 Z" fill="#7C3AED"/>
    <path d="M28,20 L38,4 L48,36 Z" fill="#22C55E" opacity="0.85"/>
  </g>
  <text x="62" y="33" font-family="Inter, 'Segoe UI', sans-serif" font-weight="800" font-size="12">
    PeakLogic
  </text>
</svg>
```

[Copy SVG \(light\)](#)

Canonical files

The only standalone logo assets that should exist. Reference these directly, or one shared component built from them — never re-author the path data.

marketing/brand/peaklogic-mark.svg	Mark only
marketing/brand/peaklogic-logotype.svg	Full logotype, light backgrounds
marketing/brand/peaklogic-logotype-dark.svg	Full logotype, dark backgrounds

03

The logotype typeface

This is the single most-violated rule in the entire brand system after wordmark color, found wrong across most repos that render the logotype: the typeface silently falls back to the operating system's default sans-serif instead of Inter. Called out here on its own, not buried in a general typography note.

THE LOGOTYPE IS ALWAYS SET IN

Inter — Weight 800

letter-spacing: -1 (SVG) / -0.02em to -0.03em (CSS) •
fonts.google.com/specimen/Inter

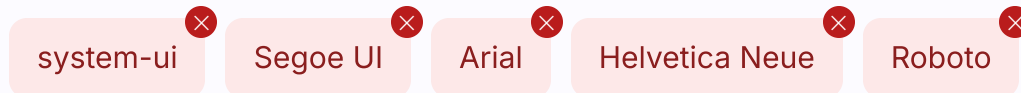

Load the full weight range, every time

```
<link rel="preconnect" href="https://fonts.googleapis.com">
<link rel="preconnect" href="https://fonts.gstatic.com" crossorigin>
<link href="https://fonts.googleapis.com/css2?family=Inter:wght@400;500;600;700;800&display=block">
```

Note the range ends at 800. Loading only up to 700 and then applying `font-weight: 800` in CSS doesn't error — it just silently substitutes the nearest loaded weight or a synthetic bold, and the wordmark renders subtly wrong in a way that's easy to miss in review.

Never substitute

Every one of these has been found standing in for Inter somewhere in the fleet, always by omission (a missing font link), never by a deliberate choice:

A page that genuinely cannot load Google Fonts (offline-first, strict CSP) should fall back to the system sans-serif stack deliberately and visibly documented as a fallback — never silently, and never left unnoticed for months.

04

Clear space & minimum size

Clear space is measured in **X** — the mark's own height. Nothing else (text, UI chrome, a container edge) may enter that margin on any side.

Minimum size

Below the digital floor, the green facet starts to disappear into anti-aliasing and the two colors read as one blob — stop shrinking before that happens.

16px — favicon floor

24px — in-app floor

48px — comfortable

05

Palette

Three core colors carry the brand. A small extended set supports UI without ever substituting for the core three in the logo itself.

COLOR	HEX	USAGE
 Purple	#7C3AED	Core. "Logic," primary accent, links, focus states.
 Green	#22C55E	Core. Mark's highlight facet only, always 85% opacity.
 Ink	#0F172A	Core. "Peak" on light backgrounds, body text, dark surfaces.
 Purple-mid	#8B5CF6	Extended. Hovers, UI accents, gradients — never the wordmark.
 Purple-soft	#EDE9FE	Extended. Tint backgrounds, badges.
 Green-soft	#DCFCE7	Extended. Success-state tints.

06

The rule that never bends

NON-NEGOTIABLE

"Logic" is always **#7C3AED** — on every background, with no exception.

Only "Peak" flips between ink and white to stay legible on its background. The wordmark's purple never changes.

07

Logo in context

Three real placements, at the spacing and crop each one actually calls for.

Browser tab — padded viewBox, favicon only

In-app navigation — tight-cropped mark, inline SVG + text span

Locations Devices Reports

Login / splash — one fused inline SVG, mark + real SVG text

08

Usage

DO

- Render "Logic" as exactly `#7C3AED`, always.
- Load Inter weight 800 wherever the wordmark appears.
- Size the mark at `1.2em` relative to the wordmark's font-size.
- Scale the mark and logotype uniformly.
- Use one fused inline SVG for login and splash screens.
- Reference the canonical files, or a shared component built from them.

DON'T

- Substitute `#8B5CF6` or any other shade for "Logic."
- Invent a light/dark-conditional wordmark color.
- Pair the mark and wordmark at independently-chosen pixel sizes.
- Stretch the mark non-uniformly.
- Recolor the green facet or shift its opacity from 0.85.
- Ship a product surface with no favicon reference.

Implementation spec

Mark height is always 1.2× the wordmark's font-size, set in em units so the ratio holds at every screen size.

```
.brand-icon { width: 1.6em; height: 1.2em; }  
.brand-word { font-size: 1em; } /* the icon's 1.2em is relative to this */
```

Two accepted viewBox crops: the padded 0 0 32 32 for standalone assets, the tight-cropped 4 10 24 18 for every inline in-app lockup — it's what makes the ratio above land cleanly on a text baseline.

Favicon

The padded mark, no background shape, on every product and marketing surface without exception.

```
<link rel="icon" href="/favicon.svg" type="image/svg+xml">
```

White-label distinction

Channel partners render their own branding inside the product — a monogram, a color pair, a wordmark of their own. That system is separate and not governed by this document. The one place the two meet is a "Powered by PeakLogic" attribution line beside a partner's mark — that line is PeakLogic's own brand, and follows every rule above.

PeakLogic Brand Guidelines, v1.0 — maintained at `marketing/brand/BRAND_GUIDELINES.md` across every PeakLogic repository.
